

6-2 TEAM NEWS

English Language Arts

We are on a creative adventure with fiction short story writing! Our goal for this unit is to write a fiction short story with 2- 3 characters and 2- 3 scenes. Please encourage your child to read for at least 30 minutes daily and to write one JOT in the Reading Journal. Please see Schoology to find directions on how to access the e-lessons in Google Classroom.

Math 6 & 6/7

With our new experience of e-learning, please be aware that directions will exist in the description of each daily Google Classroom post. Google Classroom can be accessed through Schoology. We will use this time to sharpen our mathematical reasoning skills and focus on expressing our ideas through words. This will be done via Google Classroom comments, posts, and videos. Students will use various platforms to express their thought processes and understanding of mathematical topics.

Science

As with all classes, please use Schoology as the central platform for instruction. From there, students will be directed to my Google Classroom page. We will continue studying basic concepts related to Chemistry, Matter, and Energy. Initially, we will continue learning about the definition of “matter.” Next, our focus will be on different types of changes that matter can go through and its various states. Chemistry is a fun unit because it lends itself to demos and hands on experiences. While we may not be at school, there are some great websites we will use to see virtual demonstrations. The basics we cover are intended to help us with our upcoming water unit.

World Geography

As we take on the adventure of e-learning, our geographers are wrapping up their study Africa. We will then dive into Asia for the rest of April. Through our e-learning, I will incorporate various platforms and learning strategies to challenge and engage all students. Please continue to use Schoology as the starting point for all World Geography e-learning work.
