

Unit 9 Day 11:  
Trigonometry  
(9.7) Law of Sines

In order to solve a non-right triangle you need to know one side and 2 other pieces of info.

## Law of Sines

If triangle  $ABC$  has sides of length  $a$ ,  $b$ , and  $c$ , then:

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

**\* NOTE:** Capital letters denote angles

lower case letters denote sides.

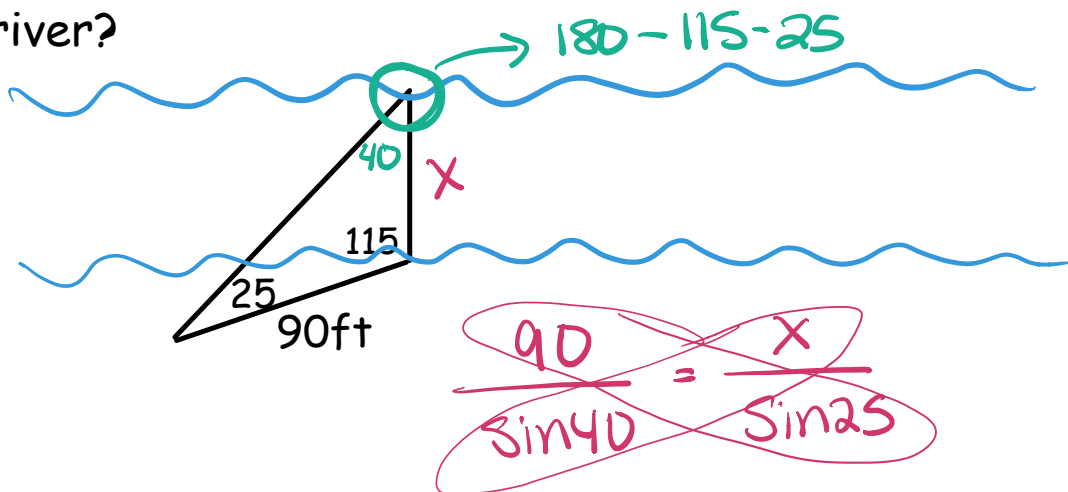

Very important to know this!

ROUNDING: Sides = 1 decimal places

Angles = Nearest whole #

## Example

A surveyor wants to find the width of a river from a particular point on the shoreline for construction of a new bridge. The surveyor's measurements are shown. How wide is the river?

$$\frac{90}{\sin 40} = \frac{X}{\sin 25}$$

$$X \sin 40 = 90 \sin 25$$

$$X = \frac{90 \sin 25}{\sin 40}$$

$$X = 59.2 \text{ ft}$$

### Example

Find the length  $c$ , given that  $A=94$ ,  $C=67$ , and  $b=25$ .

$$180 - 94 - 67 = B$$

$$19 = B$$

~~$$\frac{25}{\sin 19} = \frac{c}{\sin 67}$$~~

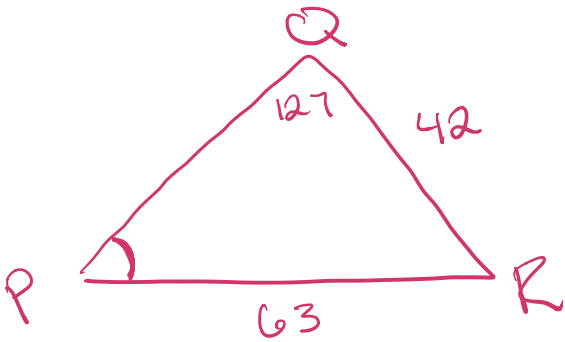

$$c \sin 19 = 25 \sin 67$$

$$c = \frac{25 \sin 67}{\sin 19}$$

$$c = 70.7$$

### Example

Find the measure of angle P given that  $Q=127$ ,  $q=63$ , and  $p=42$ .

$$\frac{42}{\sin P} = \frac{63}{\sin 127}$$

$$63 \sin P = 42 \sin 127$$

$$\sin P = \frac{42 \sin 127}{63}$$

$$P = \sin^{-1}\left(\frac{42 \sin 127}{63}\right)$$

$$P = 32^\circ$$

## Example

Sketch ABC, then find all angle measures and side lengths.  $B=56$ ,  $C=84$ ,  $c=15$

$$\frac{15}{\sin 84} = \frac{b}{\sin 56}$$

$$b \sin 84 = 15 \sin 56$$

$$b = \frac{15 \sin 56}{\sin 84}$$

$$b = 12.5$$

$$A = 180 - 84 - 56$$

$$A = 40$$

$$\frac{15}{\sin 84} = \frac{a}{\sin 40}$$

$$a \sin 84 = 15 \sin 40$$

$$a = \frac{15 \sin 40}{\sin 84}$$

$$a = 9.7$$

Remember how I said SSA was a special case?

With this given info. you can have 1 triangle , 2 triangles or no triangle at all.

**This only is a possibility if one of the sides that is given is the same letter as the angle that is given.**

### Possible Triangles in the SSA Case

Consider a triangle in which you are given  $a$ ,  $b$ , and  $A$ . By fixing side  $b$  and angle  $A$ , you can sketch the possible positions of side  $a$  to figure out how many triangles can be formed. In the diagrams below, note that  $h = b \sin A$ .

**$A$  is obtuse.**

$a \leq b$   
No triangle

$a > b$   
One triangle

**$A$  is acute.**

$h > a$   
No triangle

$h < a < b$   
Two triangles

$h = a$   
One triangle

$a > b$   
One triangle

## Steps to determine # of triangles.

1. Is it SSA?

- if yes, continue
- if no, one triangle

2. Is the side across from the given angle shorter than the second side?

- if yes, continue
- if no, one triangle

3. Find the height  $h = x \sin y$

where  $y = \text{given angle}$

$x = \text{second side}$

4. Is the side across from the given angle greater than  $h$ ?

- if yes, 2 triangles
- if no, no triangle

## Example

Determine if there is one triangle, two triangles or no triangle.

$$A=62, a=10, b=12$$

① is it SSA? yes ✓

② is  $a < b$ ? yes ✓  $10 < 12$

③ Find height  $h = x \sin y$

$$h = 12 \sin 62$$

$$h = 10.6$$

④ is  $a > h$ ? NO

$$10 \not> 10.6$$

Conclusion: NO  $\triangle$

## Example

Determine if there is one triangle, two triangles or no triangle.

$$A=54, a=6, b=7$$

① is it SSA? yes ✓

② is  $a < b$ ? yes ✓  $6 < 7$

③ find height

$$h = 7 \sin 54$$

$$h = 5.7$$

④ is  $a > h$ ? yes ✓  $6 > 5.7$

Conclusion: 2  $\Delta$ 's

## Example

Determine if there is one triangle, two triangles or no triangle.

$$A=95, a=18, C=35$$

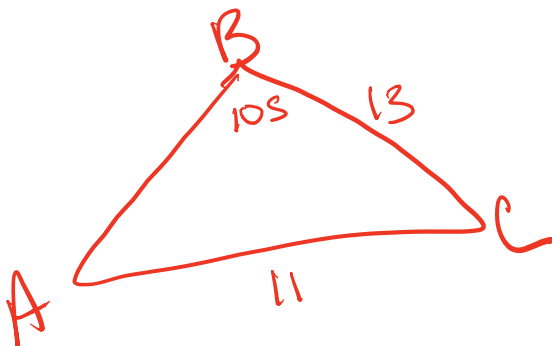

① is it SSA? NO

conclusion: one  $\triangle$

## Example

Determine if there is one triangle, two triangles or no triangle.

$$B=105, b=11, a=13$$

- ① is it SSA? yes ✓
- ② is  $b < a$ ? yes ✓  $11 < 13$
- ③  $h = 13 \sin 105$   
 $h = 12.6$
- ④ is  $b > h$ ? NO  $11 \not> 12.6$

Conclusion: NO  $\triangle$

HW:

13.5 Law of Sines WS

Mini Quiz:

Wednesday 3/11 Thursday 3/12
