

MOSAICS

Sixth grade

Students are working hard on their house designs. They will be creating three different floor plans. They will draw blueprints for one of their designs. Eventually they will work with partners to build their houses to scale out of cardboard.

Seventh grade

The stop-motion videos are developing nicely. The students have been working on creating their objects out of clay, legos or paper. The stories they are creating from their research have been informative and thoughtful. I have really enjoyed watching them bring their ideas to life.

Eighth grade

Robots have been built! The students are busy programming their robots to light up, solve math problems, play music and move in different patterns. I am always impressed by what they do with their robots and many of them are surprised as well.
